The GEET processor produces some sort of highly efficient fuel from various mixtures. In the tractor case, this is an air and water vapor mixture. The GEET processor seems to produce a gaseous fuel using the exhaust heat as energy source. This fact is demonstrated from the following:

Reflections on the Massey-Ferguson 95CV tractor operation

When running a car or a large engine with GEET, for every three feet of pipe between the reactor and the intake of the engine, there is a one-second delay in engine response time. For generators, this may not be a big deal, but for automobiles and trucks pulling heavy loads, a one-second delay is unacceptable.
