Spirally Symmetric Solutions Of Vlasov Maxwell Equations The Vlasov-Einstein system describes the evolution of an ensemble of particles (such as stars in a galaxy, galaxies in a galaxy cluster etc.) interacting only by the gravitational field which they create collectively and which obeys Einstein's field equations. The matter distribution is described by the Vlasov or Liouville equation for a collisionless gas. Recent investigations seem to ...

Vlasov-Poisson system with an attractive force spherically symmetric solutions with negative energy develop singularities in finite time [1]. It is easy to show that in these solutions the first singularity occurs at the center of symmetry. On the other hand it was also shown in [1] that spherically symmetric solutions of the

In fact, there exist well-known explicit solutions to the Vlasov-Poisson system describing axially symmetric disc galaxies which give rise to flat or even increasing rotation curves. The Mestel discs and the Kalnajs discs are examples of such solutions (cf. Binney & Tremaine 1987).

the axially symmetric Vlasov-Poisson system and Einstein-Vlasov system intensively during the time period 1985-1995. They found many interesting and also remarkable results. Static and stationary solutions were obtained. The stability of these solutions were studied. Gravitational collapse was investigated and they claimed that

Spirally Symmetric Solutions Of Vlasov Maxwell Equations for axisymmetric solutions to the Einstein-Vlasov system are for solutions that are perturbed o of spherically symmetric Newtonian solutions. These results are due to Andr easson et al. in [8] for the static case, and in [9] for the stationary case. It remains an interesting open question to

Spherically symmetric solutions to the Cauchy problem for the relativistic Vlasov-Poisson system are studied in three space dimensions. If the energy is positive definite (the plasma physics case), global classical solutions exist.

We prove the existence of axially symmetric solutions to the Vlasov-Poisson system in a rotating setting for sufficiently small angular velocity. The constructed steady states depend on Jacobi's integral and the proof relies on an implicit function theorem for operators.

We prove the existence of static, asymptotically flat non-vacuum spacetimes with axial symmetry where the matter is modeled as a collisionless gas. The axially symmetric solutions of the resulting Einstein-Vlasov system are obtained via the implicit function theorem by perturbing off a suitable spherically symmetric steady state of the Vlasov-Poisson system.
