11 Torque / User Guide Torque Section This section is where Torque tone-change processing is controlled. The Torque Knob controls the amount of formant shift. This action mostly affects the frequencies around the Focus setting. So if Torque is not correcting tone as expected, re-adjust the Focus setting.

The amount of torque that is applied depends on the mount of force that you apply to the tool's handle and the length of the wrench. To figure out the torque, the torque formula is: force x length = torque. So, let's say your torque wrench is a foot long, and you apply 30 pounds of force to the handle.
